DOI: 10.5772/1781

Cancer is now the most common cause of death in the world. However, because of early diagnosis, better treatment, and advanced life expectancy, many cancer patients frequently live a long, happy, and healthy life after the diagnosis- and often live as long as patients who eventually do not die because of cancer. This book presents newer advances in diagnosis and treatment of specific cancers, an evidence-based and realistic approach to the selection of cancer treatment, and cutting-edge laboratory developments such as the use of the MALDI technique and computational methods that can be used to detect newer protein biomarkers of cancers in diagnosis and to evaluate the success of treatment.

## Book Contents

- Chapter 1 **Vitamin D and Cancer**
- Chapter 2 **Psychogenic Carcinogenesis**
- Chapter 3 **Rectal Cancer - Staging and Surgical Approach**

- Chapter 4 **Helping Patients Make Treatment Choices for Localized Prostate Cancer**
- Chapter 5 **Automatic Diagnosis of Breast Tissue**
- Chapter 6 **Testosterone for the Treatment of Mammary and Prostate Cancers: Historical Perspectives and New Directions**
- Chapter 7 **Emerging Imaging and Operative Techniques for Glioma Surgery**
- Chapter 8 **Podocalyxin in the Diagnosis and Treatment of Cancer**
- Chapter 9 **Using Clinical Proteomics to Discover Novel Anti-Cancer Targets for MAb Therapeutics**
- Chapter 10 **MALDI-MSI and Ovarian Cancer Biomarkers**
- Chapter 11 **Computational Strategies in Cancer Drug Discovery**
- Chapter 12 **Science and Affordability of Cancer Drugs and Radiotherapy in the World - Win-Win Scenarios**
