DOI: 10.5772/1467

The book Cancer of the Uterine Endometrium - Advances and Controversies brings together an international collaboration of authors who share their contributions for the management of endometrial carcinoma. The scope of the text is not basic, but rather aims to provide a comprehensive and updated source of advances in the diagnosis and therapeutic strategies in this field of gynecologic cancer. Each section in the book attempts to provide the most relevant evidence-based information in the biology and genetics, modern imaging, surgery and staging, and therapies for endometrial cancer. It is hoped that future editions will bring additional authors to contribute to this endeavor. To this end, it is our patients who will benefit from this work.

Book Contents

- Chapter 1 **Molecular Biology of Endometrial Carcinoma**
- Chapter 2 **The Role of ErbB Receptors in Endometrial Cancer**
- Chapter 3 **Hereditary Endometrial Carcinoma**
