To determine which author names should be grouped together under a single author identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, year of publication, citations, and co-authorship. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages for authors with more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)
